

DocuTrack 3000

Imagine if you could store student reports electronically in a safe, encrypted system that would allow not only other teachers to access and add to the document, but would also allow parents to access and read the report at a time of your choosing. Imagine the money that could be saved by not having to print every report, from every teacher, for every student. Imagine the time that could be saved by allowing multiple teachers access to the one online student report. Imagine the results you could achieve if each teacher could see the nature of the interaction a particular student has with his or her other teachers. Imagine the headaches and costs that could be avoided if you did not have to send home printed reports. DocuTrack 3000 is an electronic document tracking and sharing system designed to make document management easy. With DocuTrack3000, anytime someone accesses, alters or prints a document, the system keeps a record of who, what, when, where and why. Furthermore, all files are managed electronically, ensuring that you have complete control over who sees what, and the actions they can perform such as printing, copying, emailing or manipulating information. The system is also extremely easy to set up and manage thanks to the intuitive user interface. Once an account is set up (a relatively simple affair), users create their new project, add the desired documents, establish who will have access, to what degree they will have access, and away you go. Collaborative document development and workflow management tools enable users to develop, share, approve, and archive electronic documents in one streamlined process.

Cambridge HOT Maths

HOT maths Unlimited is a fully interactive learning system covering the early, middle secondary and upper

primary curriculum, and can even help senior secondary students with revision of specific subjects. Brought to you by Cambridge University Press, HOT maths helps students build mathematical skills while working at their own pace. Students are able to test themselves and get immediate feedback to guide their study and revision. The HOT maths program features interactive animations, printable worksheets with tasks, games, puzzles and solutions, and an illustrated comprehensive dictionary linked to the lessons. Cambridge HOT maths is the perfect way to motivate students, as the program caters for the range of abilities in the classroom. By keeping detailed records of student achievement and progress via the reporting system, Cambridge HOT maths saves time and paperwork in the classroom. The program manages and provides feedback to teachers of the homework process, providing access to skills practice as well as richer tasks aimed at encouraging reflection, problem solving and skills application. Easily integrated with IWBs and also available to students online at home, Cambridge HOT maths is the perfect maths tutor, both in the classroom and at home.

eBeam - ICT solutions for every classroom

IWBs are essential tools for the modern learning environment, but having one in every classroom is an unthinkable cost for most schools. Until now! The eBeam Complete package from Keepad Interactive can turn any flat surface into a state-of-the-art interactive whiteboard, in the blink of an eye. It can also turn your ordinary whiteboard into a digital copyboard, letting you save and print your notes for the class, and even share your work with teachers and students worldwide. How does it work? Simply attach the eBeam Pod to any flat surface, aim your projector, and just like that, you have an interactive whiteboard up to 100" across. Or attach the Pod to your existing whiteboard and it is instantaneously transformed into a digital copyboard. By touching the interactive stylus to whatever flat surface you've used for your new interactive whiteboard, eBeam's Interact software is automatically launched, connecting you to the global learning community including free boardcasting via the eBeam Meeting Server. The popular eBeam Wheel Tool Palette can follow you across the board so the right tools are always at hand when you need them. The eBeam Complete package also comes with four coloured markers that will save your notes to your computer for printing and sharing. Whether it's the IWB solution (eBeam Interact), the copyboard solution (eBeam Capture) or the whole package (eBeam Complete) Keepad Interactive has you covered.
