

CREATE A **DIGITAL REVOLUTION** IN YOUR CLASSROOM

EPSON DOCUMENT CAMERA

A PRODUCT OF
THE KEEPAD ICT COLLECTION

What is a Document Camera?

A Document Camera (also referred to as a Visualiser) is a digital overhead projector - it can project both 2D and 3D objects in real-time. A Document Camera allows you to display a still object, an image or text from a book or even an experiment so that it can easily be viewed by the entire class.

An invaluable, easy-to-use classroom tool.

The **Epson Document Camera** is highly portable and extremely quick to setup. Working with your existing classroom technologies, the **Epson Document Camera** connects directly to your computer with an included USB cable so it can be used with existing software packages and Interactive Whiteboards. The camera is mounted on a telescopic pole for close-ups or panoramic views, and also includes 90 degrees of rotation for viewing taller objects that can't be placed under the camera lens like a plant or test tube. Function buttons placed on the **Epson Document Camera** allow you to Auto Focus, use the Built-in white LED light or Freeze the image.

The **Epson Document Camera** is the perfect companion for your Data Projector and Interactive whiteboard, allowing you to bring in real-life objects to your projected image or IWB and still have the ability to annotate, highlight and explain key points and features.
