

Easy to
use in the
classroom!

The all in one podcasting solution

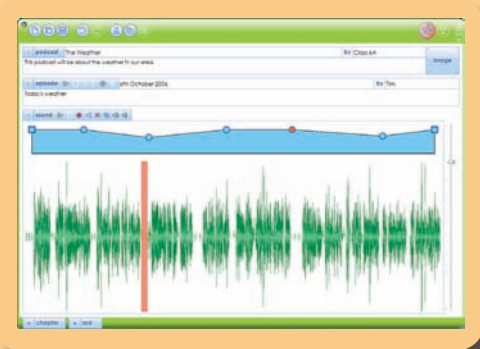

Help your students to
communicate more effectively
and realise their potential by
creating podcasts

'Tell your story' with this major new podcasting tool developed for the education market.

Your students turn to podcasts every day to share ideas with one another, keep current on their favourite TV shows, or hear the hottest new band talk about their latest album. Podcasts are an integral part of learning and communication outside the classroom for today's students. Why not put this powerful technology to work in the classroom?

Podium, from RM Asia-Pacific, is a PC-based software application designed specifically to integrate podcasting into the classroom and curriculum. It's easy to use and the possibilities of podcasting are endless.

- Record excerpts from Shakespeare or other dramas to bring plays to life for students.
- Have students work together to write and record a news segment for a past event to make a history lesson more relevant.
- Create podcasts of students interviewing a relative about his or her life experiences.
- Post podcasts on the school web site about activities and events.
- Teachers can provide additional information on homework assignments that students can access via the school web site.
- And hundreds of more interactive, creative audio projects!

Podium opens up a world of creativity to students and teachers alike. In trials, Podium has had real success in helping students who struggle to express themselves through writing tap into their creativity. Collaboration and teamwork are also encouraged and fostered when students work together to develop scripts and record podcasts.

Podium is easy to implement and even easier to use. Load the software and you'll be up and running in a matter of minutes. Get started with Podium today, with prices starting from less than \$150.
